MINDER & WORLD MODEL · FOR OPERATIONS LEADERS

Find the factory hidden inside yours.

Minder learns how your plant really runs, predicts what each decision will change, and makes every shift better than the last.

LONDON, UNITED KINGDOM

This is Elena,
a typical factory director

At 8:10 on Monday morning, Elena has two hours to make a customer commitment. Sales, production, maintenance and quality all have to sync today, as they must every day.

She is accountable for the whole factory.

but…

“Tom says the order’s finished. Quality says they’re still holding two pallets. So which is it?”

“Hiroshi retires next month. Thirty years of knowing how this place works, and most of it is still only in his head.”

“Line Three is down again. The guy who fixed it last time isn’t here, and nobody knows what to do.”

“Anna promised the customer Friday, but Production planned Monday. The teams aren’t working from the same plan at all !!"

“Sofia found the defect, but we can’t trace which machine or material caused it. The engineers won't come until late this afternoon"

“Fernando warned us about a strange vibration yesterday. Night shift never saw the warning. They switched the machine back on.”

“Day shift made 920. Night shift made 760. Same line, same product, same factory. Nobody can tell me why.”

“Every department says they’re on target. Then explain why we’ve got 200 orders sitting between drying and sorting?”

“Carlos can see the energy bill going up. He just can’t tell me which machines are causing it.”

“Tim’s team made the exact same mistake yesterday’s shift made. Why didn't anybody tell them?”

“Elena already told the customer their order was ready. Logistics just told me it’s not making today’s truck. Why?”

SO THE QUESTIONS FOR ELENA ARE…

What is your plant’s real capacity?
What happens if we do this action?

Almost no plant can answer. Its systems can’t either.

WHY NOBODY KNOWS?

Your systems see the plan. Your floor runs on unwritten rules.

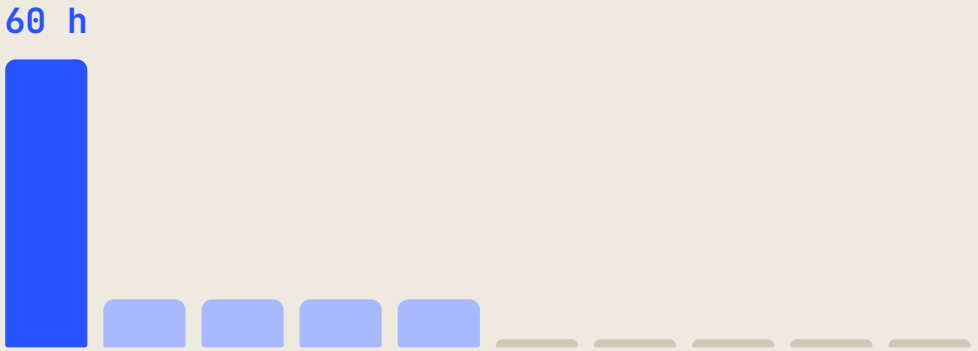

THE PLAN · WHAT YOUR SYSTEM SEES

100 hours of work. 10 people. 10 hours each.

THE FLOOR · WHAT REALLY HAPPENS

One specialist carries 60 hours. Five people wait.

The gap between the two is capacity you already pay for.

LIKE ALL FACTORY MANAGERS, ELENA HAS ACCOUNTABILITY WITHOUT OPERATIONAL TRUTH

FACTORIES TODAY FACE EVER MORE PRESSING PROBLEMS

Fragmented operational information

Labour shortages

Poor end-to-end traceability

Energy waste

Supply-chain volatility

Departments operating out of sync

Safety incidents

Cybersecurity exposure

Slow management decisions

Manual coordination and reporting

Invisible bottlenecks and waiting time

Lost organisational knowledge

Weak accountability and auditability

Defects, scrap and rework

Unplanned downtime

THE USUAL FIXES

Hiring and software can’t close a gap nobody can see.

Hire five more people	More hands in the same bottleneck. More chaos.
Buy another system	One more silo for someone to reconcile.
Commission a study	A snapshot of a factory that changes every shift.
Add an AI assistant on top	It reads each silo separately, and still misses the decisions between them.

MEET MINDER

Minder is where your whole plant is managed, powered by an AI World Model that understands it.

MINDER · THE INTERFACE

Where your people, machines, systems and robots come together, through voice, screens and sensors.

THE AI WORLD MODEL · THE BRAIN

Predicts how your plant's output, delivery, quality and energy respond to each decision, and learns across plants.

TOGETHER

The World Model is the brain. Minder is how your people see it, ask it and act with it.

Minder reaches every place where factory work happens

1 / VIA HUMAN

Minder On-device

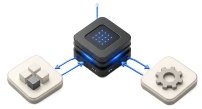

Workers interact with AI through mobile devices and wearables, feeding real-time decisions back into the system.

2 / VIA HARDWARE + SENSORS

Minder On-edge

Retrofit sensors, cameras and machine signals track output, energy, temperature and vibration per batch.

3 / VIA SOFTWARE

Minder Platform

Managers monitor Minder in real time, flagging anomalies like temperature deviations or yield drops for deeper analysis.

4 / VIA ROBOTS

Minder Robotics

Robotic arms can take over manual steps such as dough rolling and pastry pressing, freeing workers for higher-value tasks.

MINDER People, work, materials, machines and outcomes in one record.

AI WORLD MODEL **Every entry makes the World Model understands your plant deeper and better, staying secured.**

Minder unifies capabilities across 25 software categories into eight connected modules so that Minder understands and remembers the entire factory

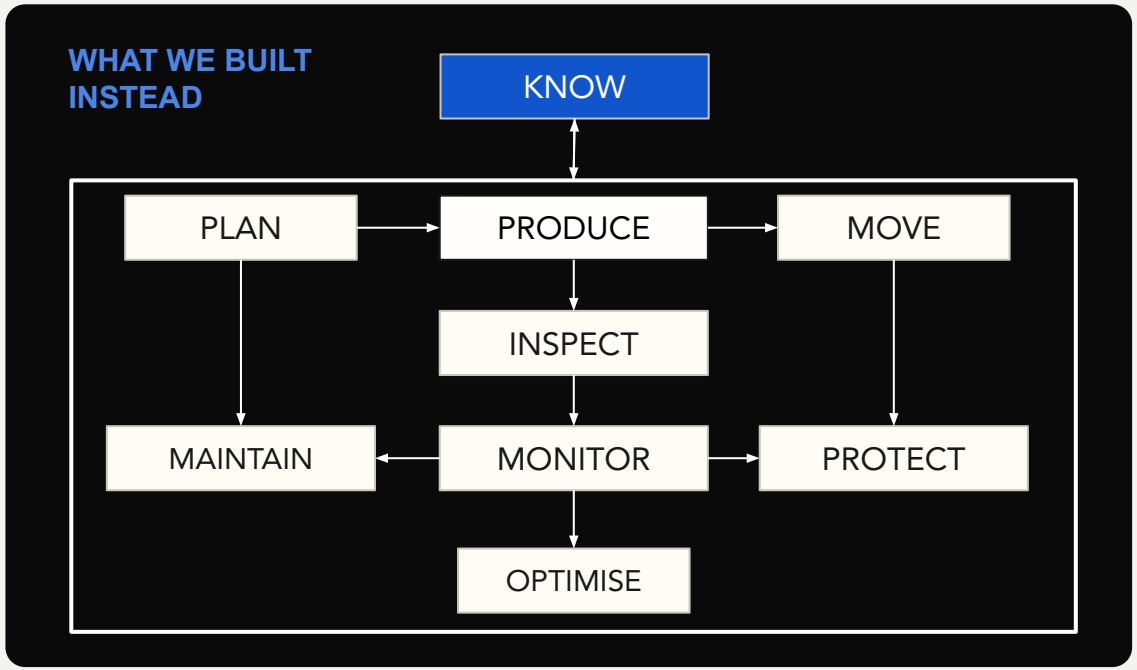

No more AI copilot or other 20+ siloed softwares. Minder is ONE shared operating system that reasons, acts, and learns

WHAT A FACTORY ALREADY RUNS ON (AND STILL CAN'T ANSWER)

MES	ERP	SCADA	CMMS	WMS
QMS	LIMS	PLM	MOM	APS
MRP	HMI	PLC	DCS	HISTORIAN
OEE	SPC	CAPA	EHS	LOTO
PERMITS	BI	TWIN	AGV/AMR	KANBAN

+ THE AI COPILOT THAT READS THEM SEPARATELY

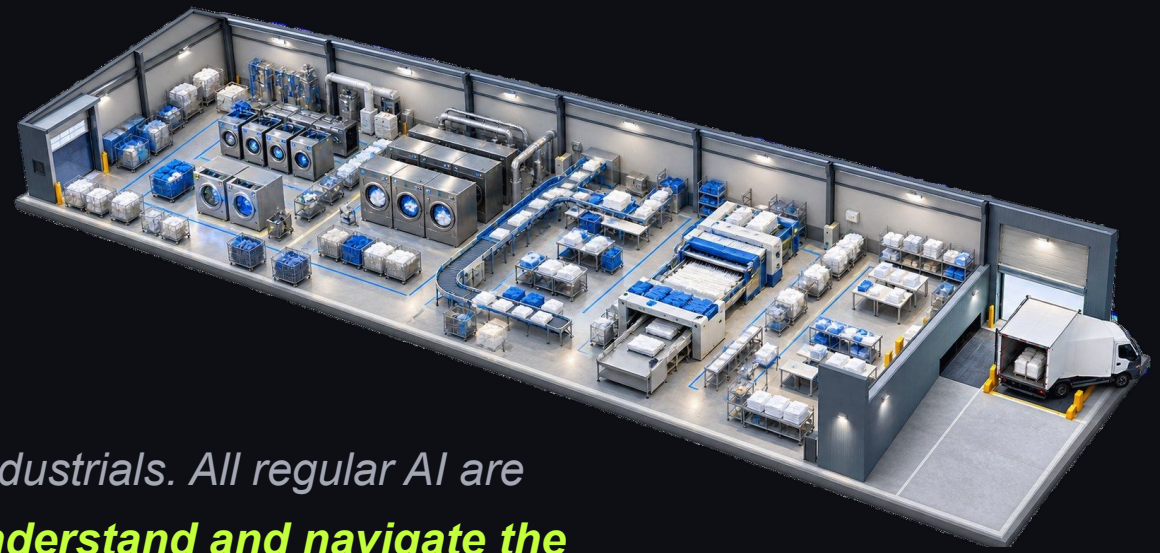

25 SOFTWARE CATEGORIES

ONE FACTORY / ONE OPERATIONAL REALITY

SEE · REMEMBER · PREDICT · ACT · RUN

What Minder AI can do that regular AI cannot?

Minder AI is a World Model, the world first built to serve industrials. All regular AI are built from public knowledge, ***a World Model is built to understand and navigate the physical world, closest to a true (intelligent) human-level reasoning capability***

01 · SEE

One live picture of the whole plant.

LIVE NOW

02 · REMEMBER

Every decision, fix and outcome, kept.

LIVE NOW

03 · PREDICT

What each choice will change.

FIRST TEST NOV 2026

04 · ACT

Minder acts. People approve.

2027

05 · RUN

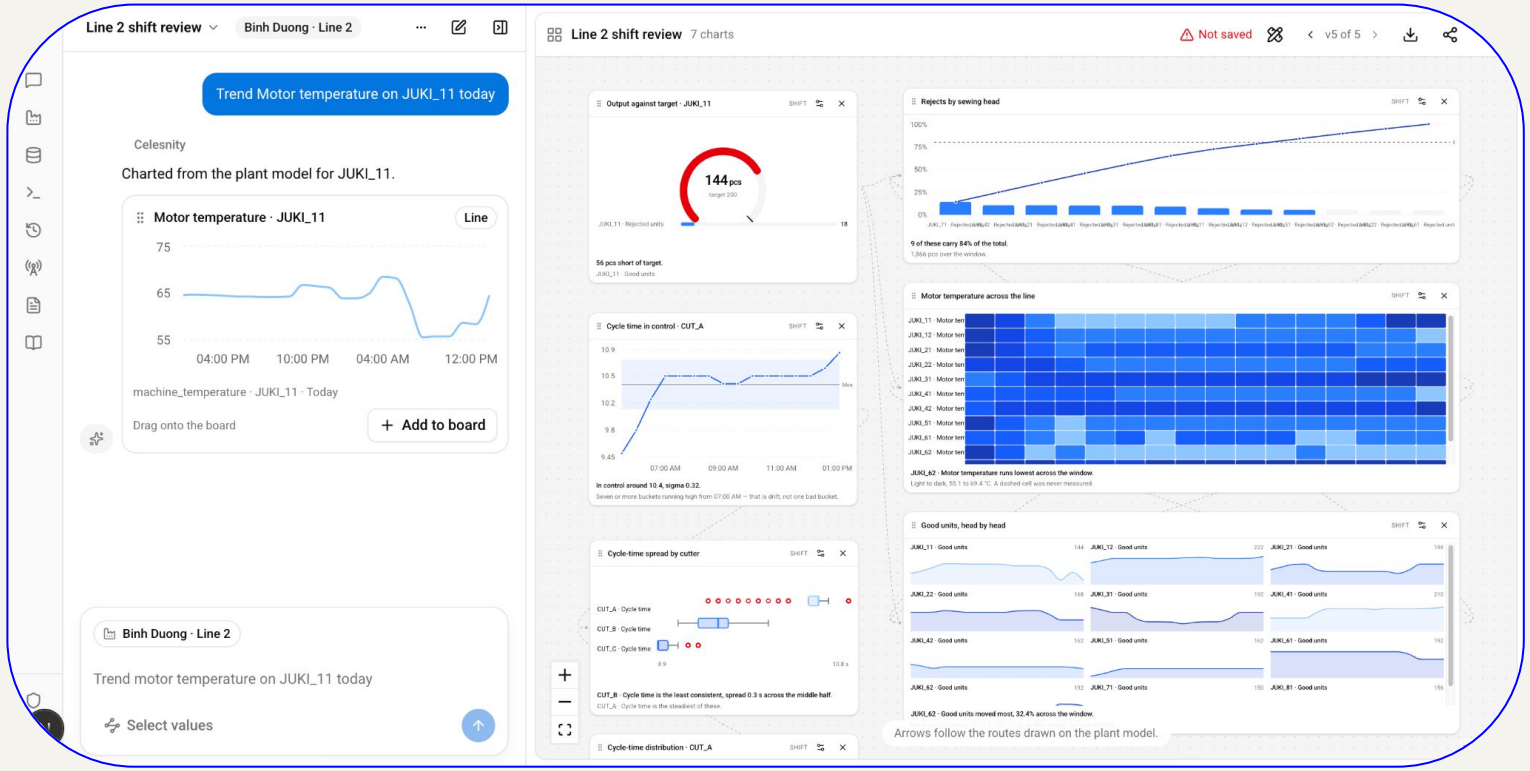

Lines run themselves, with robots.

HORIZON

01 · MINDER SEES

Minder gives Elena & every worker one operational reality

Elena can see what the organisation knows, where information conflicts, what remains uncertain, the human actual work and decisions, their interactions and true *shop floor reality*

Not just Elena, every worker remains accountable. No one needs to guess.

02 · MINDERS REMEMBERS

Capture the fix before you need it.

The fault that appears once every 18 months. The one person who knows the fix is on holiday. Let that knowledge become your factory's asset.

01 · ASK

Minder interviews your experts in quiet hours: what would you do if...

02 · LEARN

Every repair and every decision becomes part of your playbook.

03 · GUIDE

The right fix, at the machine, for whoever is on shift.

03 · MINDER PREDICTS

Elena sees what each choice will change.

ELENA ASKS

“What if we keep Line Three running two more hours?”

EVERY FORECAST

Carries its confidence. When the model is unsure, it says so and asks an expert.

RUN AS PLANNED — RISK RISES

Order ships. Breakdown risk rises.

Bearing temperature passes its limit before the shift ends.

RUN AT 80% — RECOMMENDED

Order ships. Risk stays low.

The slower run keeps the bearing in range and still makes the truck.

STOP NOW — PROMISE BREAKS

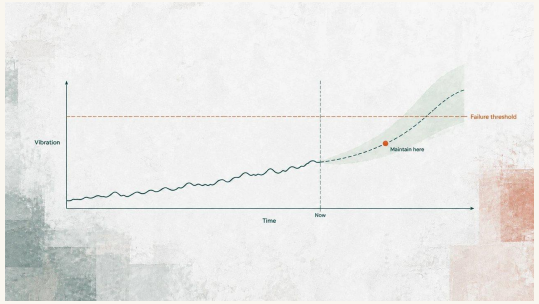

Order slips a day.

No risk to the machine, but the customer promise breaks.

Illustrative. v0 is first tested on real plant data at a Hòa Phát plant from November 2026.

03 · MINDER HELPS

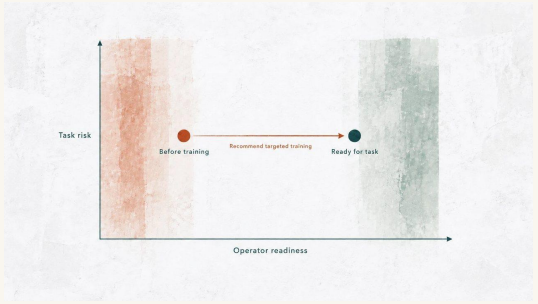

Ask it what happens next, before you act.

01 · MAINTENANCE

Read the wear. Service it before it fails.

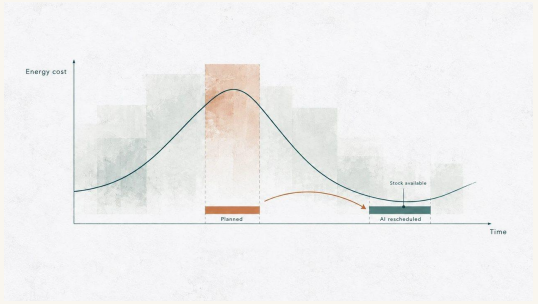

It forecasts wear and marks when to service.

02 · SAFETY AND LABOUR

Find the gap. Train before the task.

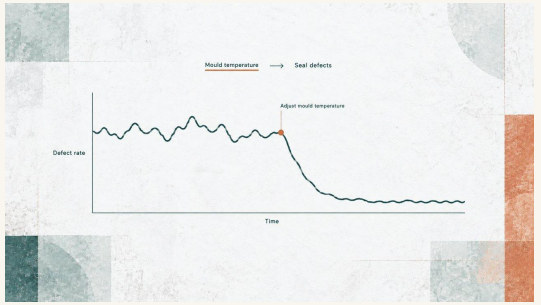

It spots who is not yet ready for a risky task.

03 · ENERGY AND INVENTORY

Shift the batch. Preserve stock.

It moves a batch to a cheaper window while stock holds.

04 · QUALITY

Find the cause. Fix it at the source.

It links mould temperature to seal defects, and defects fall.

Every forecast carries its confidence. When the World Model is unsure, it says so and asks an expert. People approve what matters.

04 · MINDER ACTS

Then Minder acts, before the problem lands on Elena’s desk.

Material runs short
Minder resequences the next orders and alerts the supervisor.

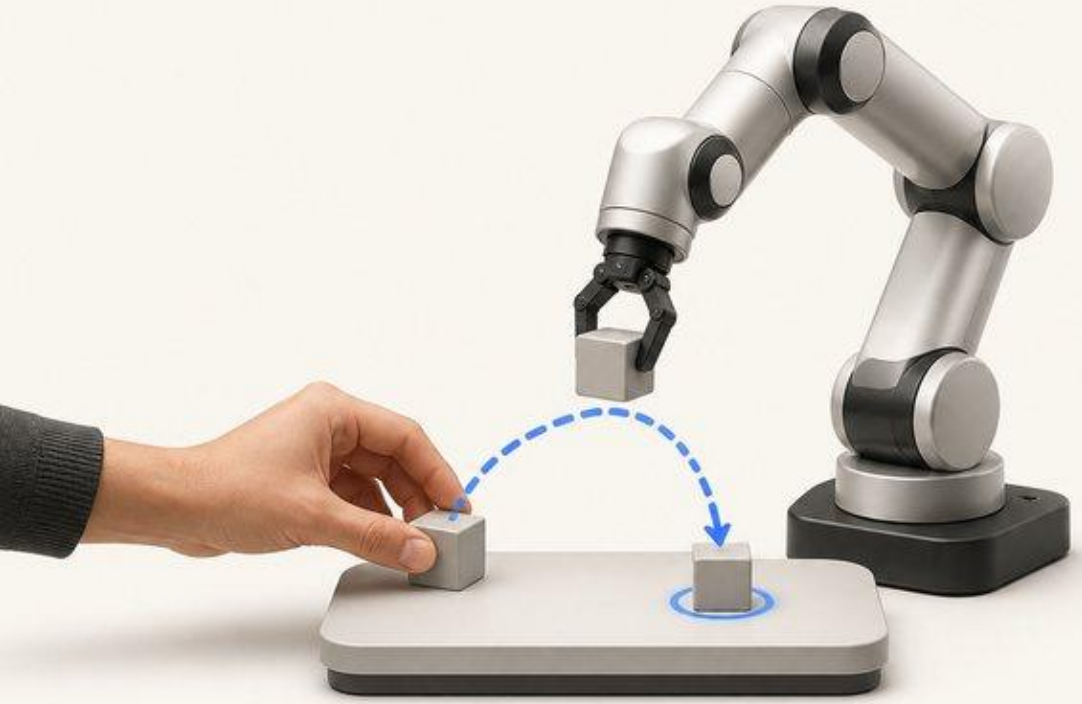

A machine runs hot
Minder gives the operator your plant’s own fix, before the breakdown.

A batch fails a check
Minder holds it, traces the cause and starts your quality routine.

Minder acts. Your people approve what matters.

05 · RUN · IN DEVELOPMENT

Next: robots learn your manual steps from your best people, inside Minder.

LEARN FROM YOUR PEOPLE

Robots learn manual steps from human demonstrations.

TAKE OVER THE REPETITIVE STEPS

Robotic arms can take over manual steps such as dough rolling and pastry pressing, freeing workers for higher-value tasks.

ONLY WHERE IT PAYS

Only where the task, safety and return make sense. Your people stay in charge.

SECURITY

BUILT WITH THE HIGHEST EUROPEAN STANDARD

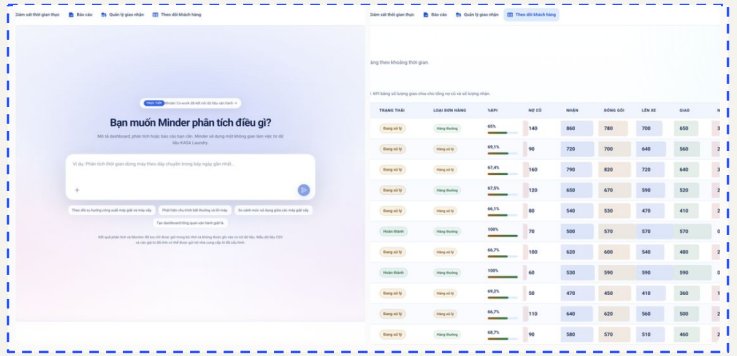

We are your factory sovereign AI. We will never have a kill switch or accept a jurisdiction where external stakeholders can limit your usage of our technology under any circumstances.

Customers own their raw data.
All data is annonysed.
GDPR compliant.

At Kasa, Minder is live, paid and moving the numbers.

KASA LAUNDRY / PHU QUOC, VIETNAM

30 / 30 assigned users active in the covered workflow

6 weeks for the initial deployment

24 months in the signed commercial agreement

OUTCOMES · APPROVED BY KASA

-58% rewash rate

-80% missing items

85% delivered on time

“Minder AI really brings the next industrial revolution to our factory.”
Ms Kim Anh Nguyen, CEO

Contract invoiced since September 2026. Outcomes: April 2026 baseline vs August 2026, measured with and approved by Kasa.

Elena needn't disrupt the factory to adopt Minder

Minder adapts to the workers, so they never have to learn another system.

Our Forward Deployed Engineers adapt current live workflow into Minder’s intelligence platform

WEEKS 1–2

On your floor

Our engineers shadow the line and map how work really flows.

WEEKS 3–6

Live

Voice, sensors and your systems connected. Nothing replaced.

WEEK 6

Your real capacity

The true bottleneck, the capacity you lose, the first fixes.

THEN

Scale

The World Model starts predicting: energy, maintenance, quality. The next line, the next plant.

HOW TO START

Start on one line with Minder. Grow into a plant the World Model can predict.

01 · PAID PILOT

An FDE maps true capacity in 8 to 12 weeks, for a fee.

02 · PROVE

Minder measures the improvement.

03 · PRICE

The pilot fee is credited to a contract priced on value.

04 · EXPAND

More autonomy, a larger contract.

FOUNDING PLANTS

Get it first. Shape it around your plant.

BOOK A FLOOR WALK →

- ✓ Priority access to the World Model
- ✓ Built around your KPIs
- ✓ Founding pricing, locked in

NEXT MONDAY, 8:10

Elena already knows her real capacity, and what happens before she decides.

Show us your hardest line.
