

Celesnity

INVESTOR PRESENTATION · OCTOBER 2026

We're building the *world model* for industry.

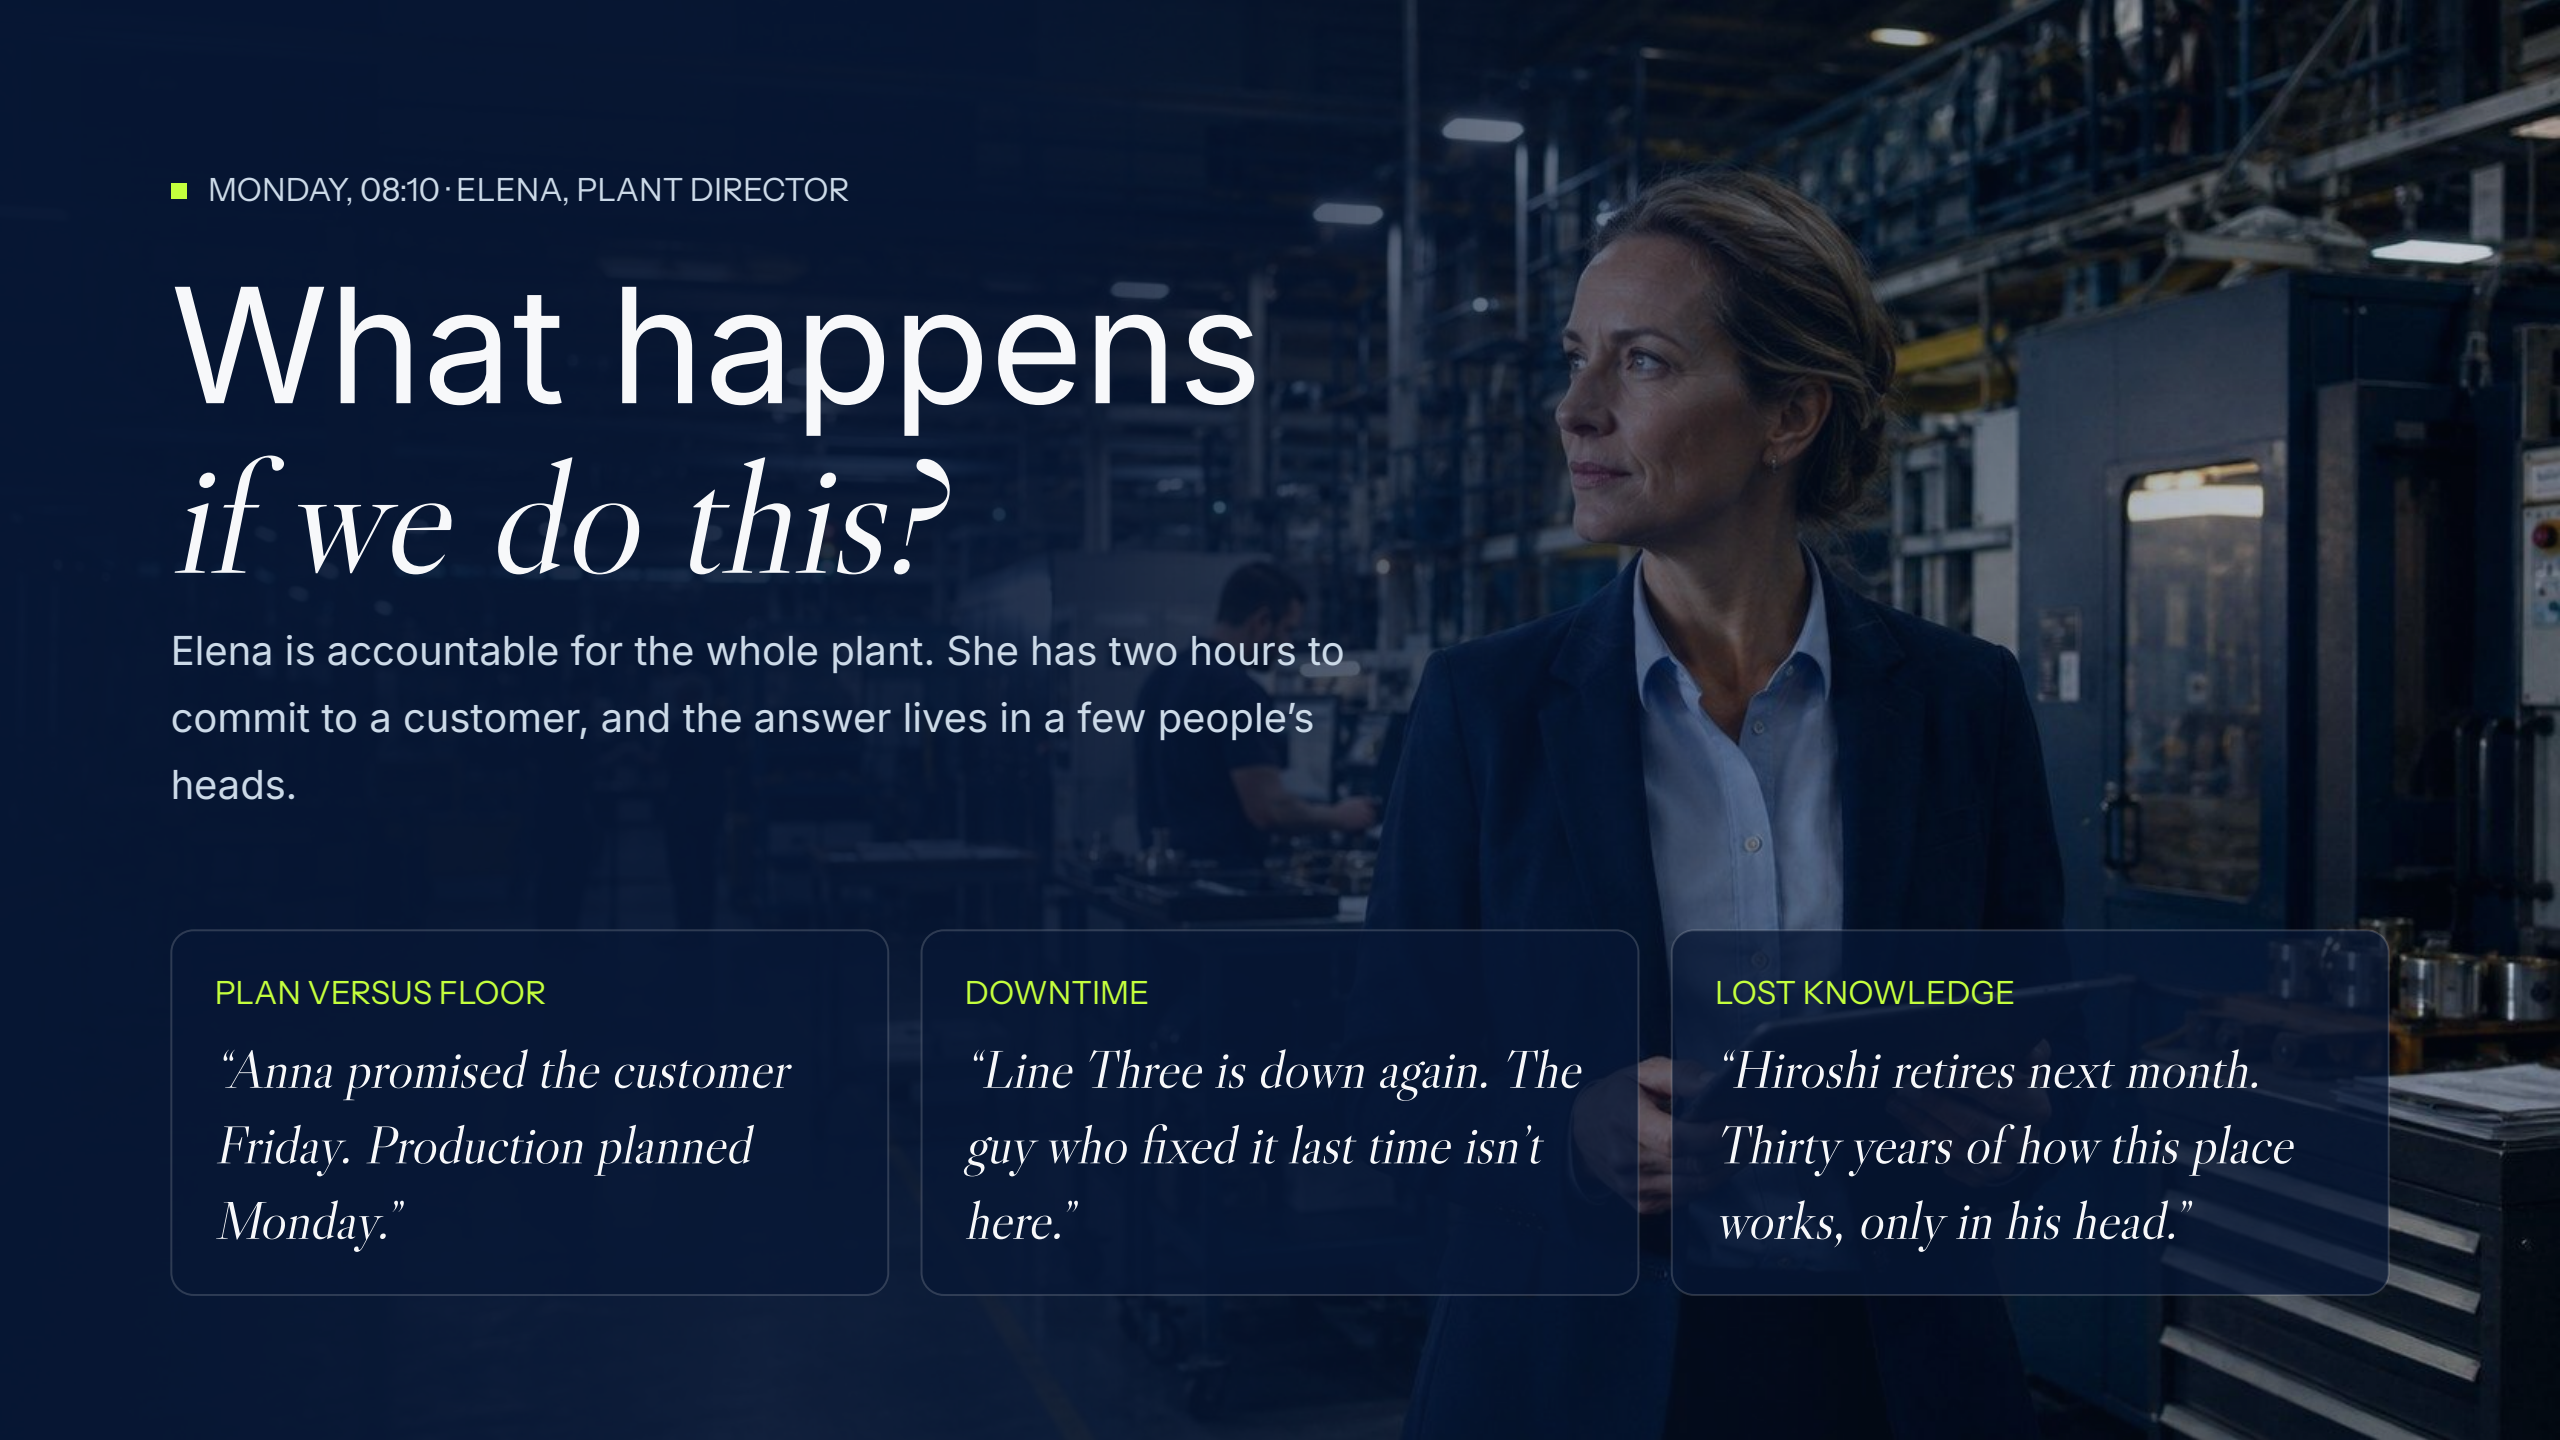

It predicts what happens in a plant when people and machines act, so factories decide before they commit.

ERIC NGUYEN & BILL NGUYEN — LONDON, UNITED KINGDOM

MONDAY, 08:10 · ELENA, PLANT DIRECTOR

What happens *if we do this?*

Elena is accountable for the whole plant. She has two hours to commit to a customer, and the answer lives in a few people's heads.

PLAN VERSUS FLOOR

"Anna promised the customer Friday. Production planned Monday."

DOWNTIME

"Line Three is down again. The guy who fixed it last time isn't here."

LOST KNOWLEDGE

"Hiroshi retires next month. Thirty years of how this place works, only in his head."

THE PROBLEM

Every system in your plant is right.
The plant is still late.

ERP	MES	WMS	CMMS	QMS
Order planned	Work performed	Material moved	Machine changed	Quality accepted

Context is lost at every handover: who decided, why, and what happened next.

Every operational pain traces back to one cause: the decisions between systems are never recorded.

- Skilled labour shortage
- Ageing equipment
- Material and cost leakage
- Supply chain blind spots
- Wasted energy

$1.4tn

a year lost to unplanned downtime by the world's 500 largest companies: 11% of their revenue.

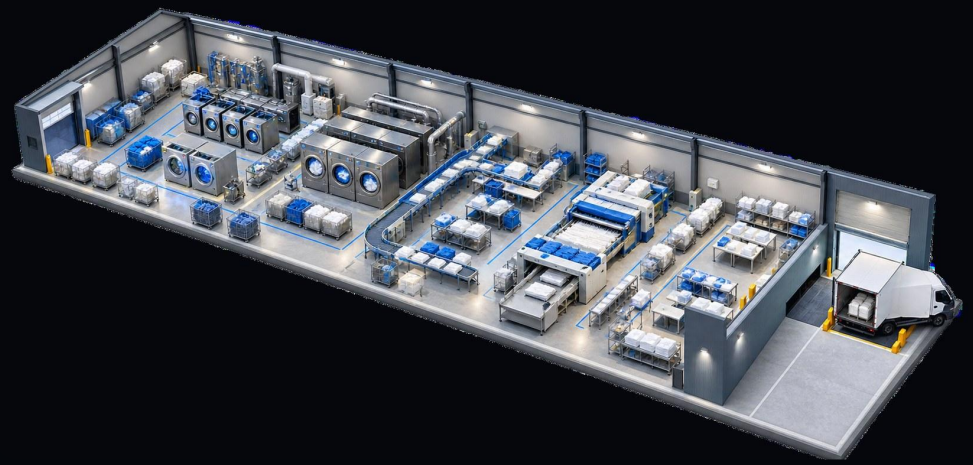

Source: Siemens, The True Cost of Downtime, 2024.

WHAT WE BUILD

The model is the brain. *Minder is its body.*

WORLD MODEL, IN PLAIN WORDS

A world model predicts how an environment responds to an action. Robot world models predict motion for one robot. Ours predicts how a plant's output, delivery, quality and energy respond, and learns across plants.

MINDER · THE BODY

Applications

Voice, sensors and systems on the floor. Live in six weeks, paid from day one.

THE RECORD

Event log

Every decision, action and outcome, recorded where it happens.

THE BRAIN

World model

Predicts what happens next in the plant. Licensed per plant, then by API.

Predictions flow back through Minder. People approve what matters.

OUR UNFAIR ADVANTAGE

Vietnam is our launching pad.

The world is our market.

01 BREADTH

Every kind of plant

Shoes, chips, steel, cars and phones. Hand assembly to full automation.

02 DEPTH

Giant floors, human skill

Some of the world's largest plants. Tacit knowledge is learnt only from people, on the floor.

03 SPEED

Live in weeks

Fewer certification walls than Europe. Roll out fast, then earn the certificates.

04 COST

Fail fast, fail cheap

A product team for ~$8k a month. Rich data, with rights agreed in weeks.

Built in Vietnam.
Governed to European standards.

UK company holds the IP, contracts and data controls · EU data stays in EU regions · GDPR, AI Act and works council ready · ISO 27001 by June 2027 · SOC 2 by August 2027

PROOF · TWO PARTNERS, TWO JOBS

Kasa proves Minder works.

Hòa Phát tests whether the model transfers.

KASA LAUNDRY · PAID SINCE SEPT 2026

Proves the bridge works

7 departments live	30/30 workers active	39,117 events a day
−59% rewash	−80% missing items	85% on time

What it gives the model: the capture pipeline, our first decision and outcome data, and an FDE playbook that goes live in six weeks. On a 24 month paid contract.

HÒA PHÁT · WORLD MODEL PARTNER

Tests whether learning transfers

~30 plants	2 sectors, steel and appliances	Nov 2026 first model test

Thirty plants sharing machine types under different conditions to prove transferability. We keep the weights, code and training rights; their AI team deploys with us.

PIPELINE 1 paid · 8 MOUs signed · 3 scoping · 8 prospecting

Nestlé and Isuzu in discussion

COMPETITION

All industrial AI reads the factory's software.

We learn the factory itself.

Category	Examples	Learns from	Misses
Industrial suites	Siemens, SAP, AVEVA	What the system records	The decisions behind them
Frontline platforms	Tulip, Augmentir	Forms workers fill in	What nobody writes down
Sensor and asset AI	Augury, Cognite, MaintainX	Machine signals, asset by asset	Orders, people, plant outcomes
AI on the stack	Symphony AI, industrial assistants	Whatever the stack holds	Anything never recorded
Robot world models	Physical Intelligence, Skild AI	Pixels and motion for robots	How a plant operates
Celesnity	Minder and the world model	Decisions, actions, outcomes	Learns across plants, by right

ADOPTION

Decision data only exists if workers use the system. Ours is voice first, in their language: 30 of 30 active at Kasa.

RIGHTS

Founding partners grant training rights on anonymised data. Incumbent contracts were written for one customer's software.

COST TO LEARN

Six weeks and two FDEs per plant, paid by partners, on ~$8k monthly burn. Each plant makes the next cheaper.

GOING GLOBAL

Vietnam proves it fast.
Global groups carry it into Europe.

01

Land in Vietnam

National champions and global groups: Hòa Phát live, Nestlé and Isuzu in discussion. Fast access, low cost, training rights.

02

Expand through the group

Global groups run sister plants in Europe on the same machine types. One relationship, many plants.

03

Win midsize plants

79,516 EU manufacturers have 50+ staff. We reach them through private equity portfolios, industrial networks and UK programmes.

WHY EUROPE BEFORE THE US

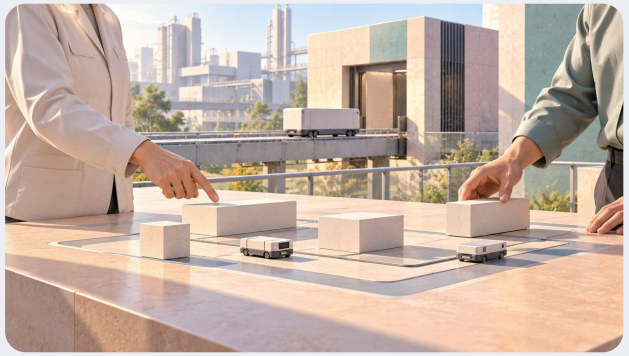

Sharpest pain: an ageing workforce, labour shortages and high energy costs. Rules that suit us: AI Act controls, data residency and deployment on site are built in from day one. We are a UK company; the US follows through the same groups' US plants.

WILL THE DATA TRAVEL?

Machines follow the same physics everywhere. Practice differs, so the model adapts to each plant with weeks of local data. That is exactly what the November test measures.

1779 LAB · PROJECT NEWCOMEN

In November we test one question: *does one model work across plants?*

WHAT WE DO

Minder and sensors go live on production assets at Hòa Phát plants. We fine tune NVIDIA Cosmos on plants A and B, then adapt it to plant C with two weeks of data.

WHAT WE MEASURE

Prediction error against a model trained only on that plant's own history, and whether our model knows when it is unsure.

PASS, BY MARCH 2027

It beats each plant's own model, with calibrated uncertainty, on five more plants.

WHAT A PASS UNLOCKS

World model licences from April 2027, the next 20 plants, and a paper with an open benchmark, FactoryTraj-Bench.

IF IT FAILS

Plants need more local data than we think. Minder still pays its way, and we narrow the model to the asset classes that do transfer.

SCORED ON Transfer to new plants · counterfactual validity on logged interventions · calibration · knowing when to abstain

BUSINESS MODEL AND MARKET

Paid per plant today.
A $100bn a year market at scale.

HOW WE CHARGE

NOW	Applications	Site licence plus a share of measured value. Live at Kasa.
NEXT	World model licence	Per plant, from April 2027. Founding partners first.
LATER	World Model API	For machine builders, software vendors, robot makers and insurers.

MARKET, A YEAR

$100bn	TAM: 10% more capacity on ~$5tn of output, 20% captured.
$39bn	SAM: 246,600 plants with 50+ staff, applications plus world model.
$390m	SOM: about 2,500 plants in five to seven years.

Per plant a year: Southeast Asia $67k to $225k · Europe and East Asia $135k to $449k

Hardware $120 to $300 a device · cloud ~$12k per plant a year · gross margin 70% to 90%+ · market: Celesnity estimates

TEAM

A lean core team that ships into plants.

CO-FOUNDER · CEO

Eric Nguyen

Ex-GP Strand Ventures, PE experience

Led the Kasa deployment in six weeks. Founded Strand Ventures, the UK's first student VC.

CO-FOUNDER · CTO

Bill Nguyen

Silicon Valley Fellow · ex-Menlo Research

Built Jan v3.5 (400k downloads), Byterover CLI (5k stars) and an AI agent for Snapchat Spectacles.

FOUNDING RESEARCHER

Robert Osazuwa Ness

Senior researcher at Microsoft Research

Author of Causal AI (Manning). Core contributor to PyWhy and GraphRAG. Leads world model research.

10	core team, founders included, full time
9	interns and FDE trainees in our academy
2	research partners, grant funded, off payroll
~$8k	monthly burn; founders unpaid until the raise

EXPERIENCE	Menlo Research · Bending Spoons · Byterover · Microsoft · Starling Bank · VNG · Zalo · FPT · AI Hay · VinRobotics · Endava
PROGRAMMES	NVIDIA Inception · Barclays Eagle Labs · NatWest Accelerator · s16vc · AltaLab · Silicon Valley Fellowship

THE RAISE

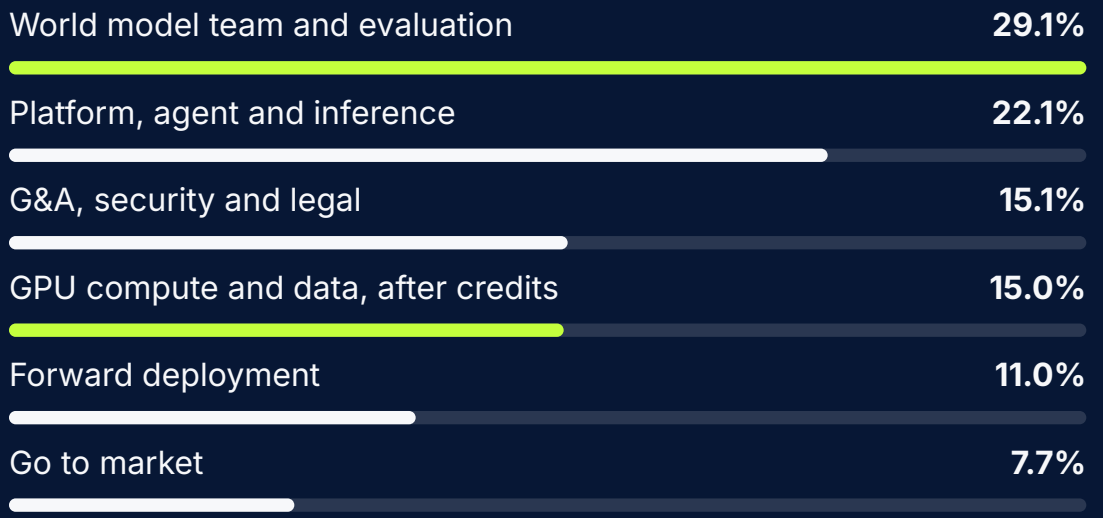

$5M to ship the world model and *run it in 50 to 100 plants by 2028.*

MILESTONES THE CAPITAL BUYS

NOV 2026	First model tested at a Hòa Phát plant
MAR 2027	Live on five more plants, beating their baselines
DEC 2027	World model across at least 20 plants
SEP 2028	World model running at 50 to 100 plants

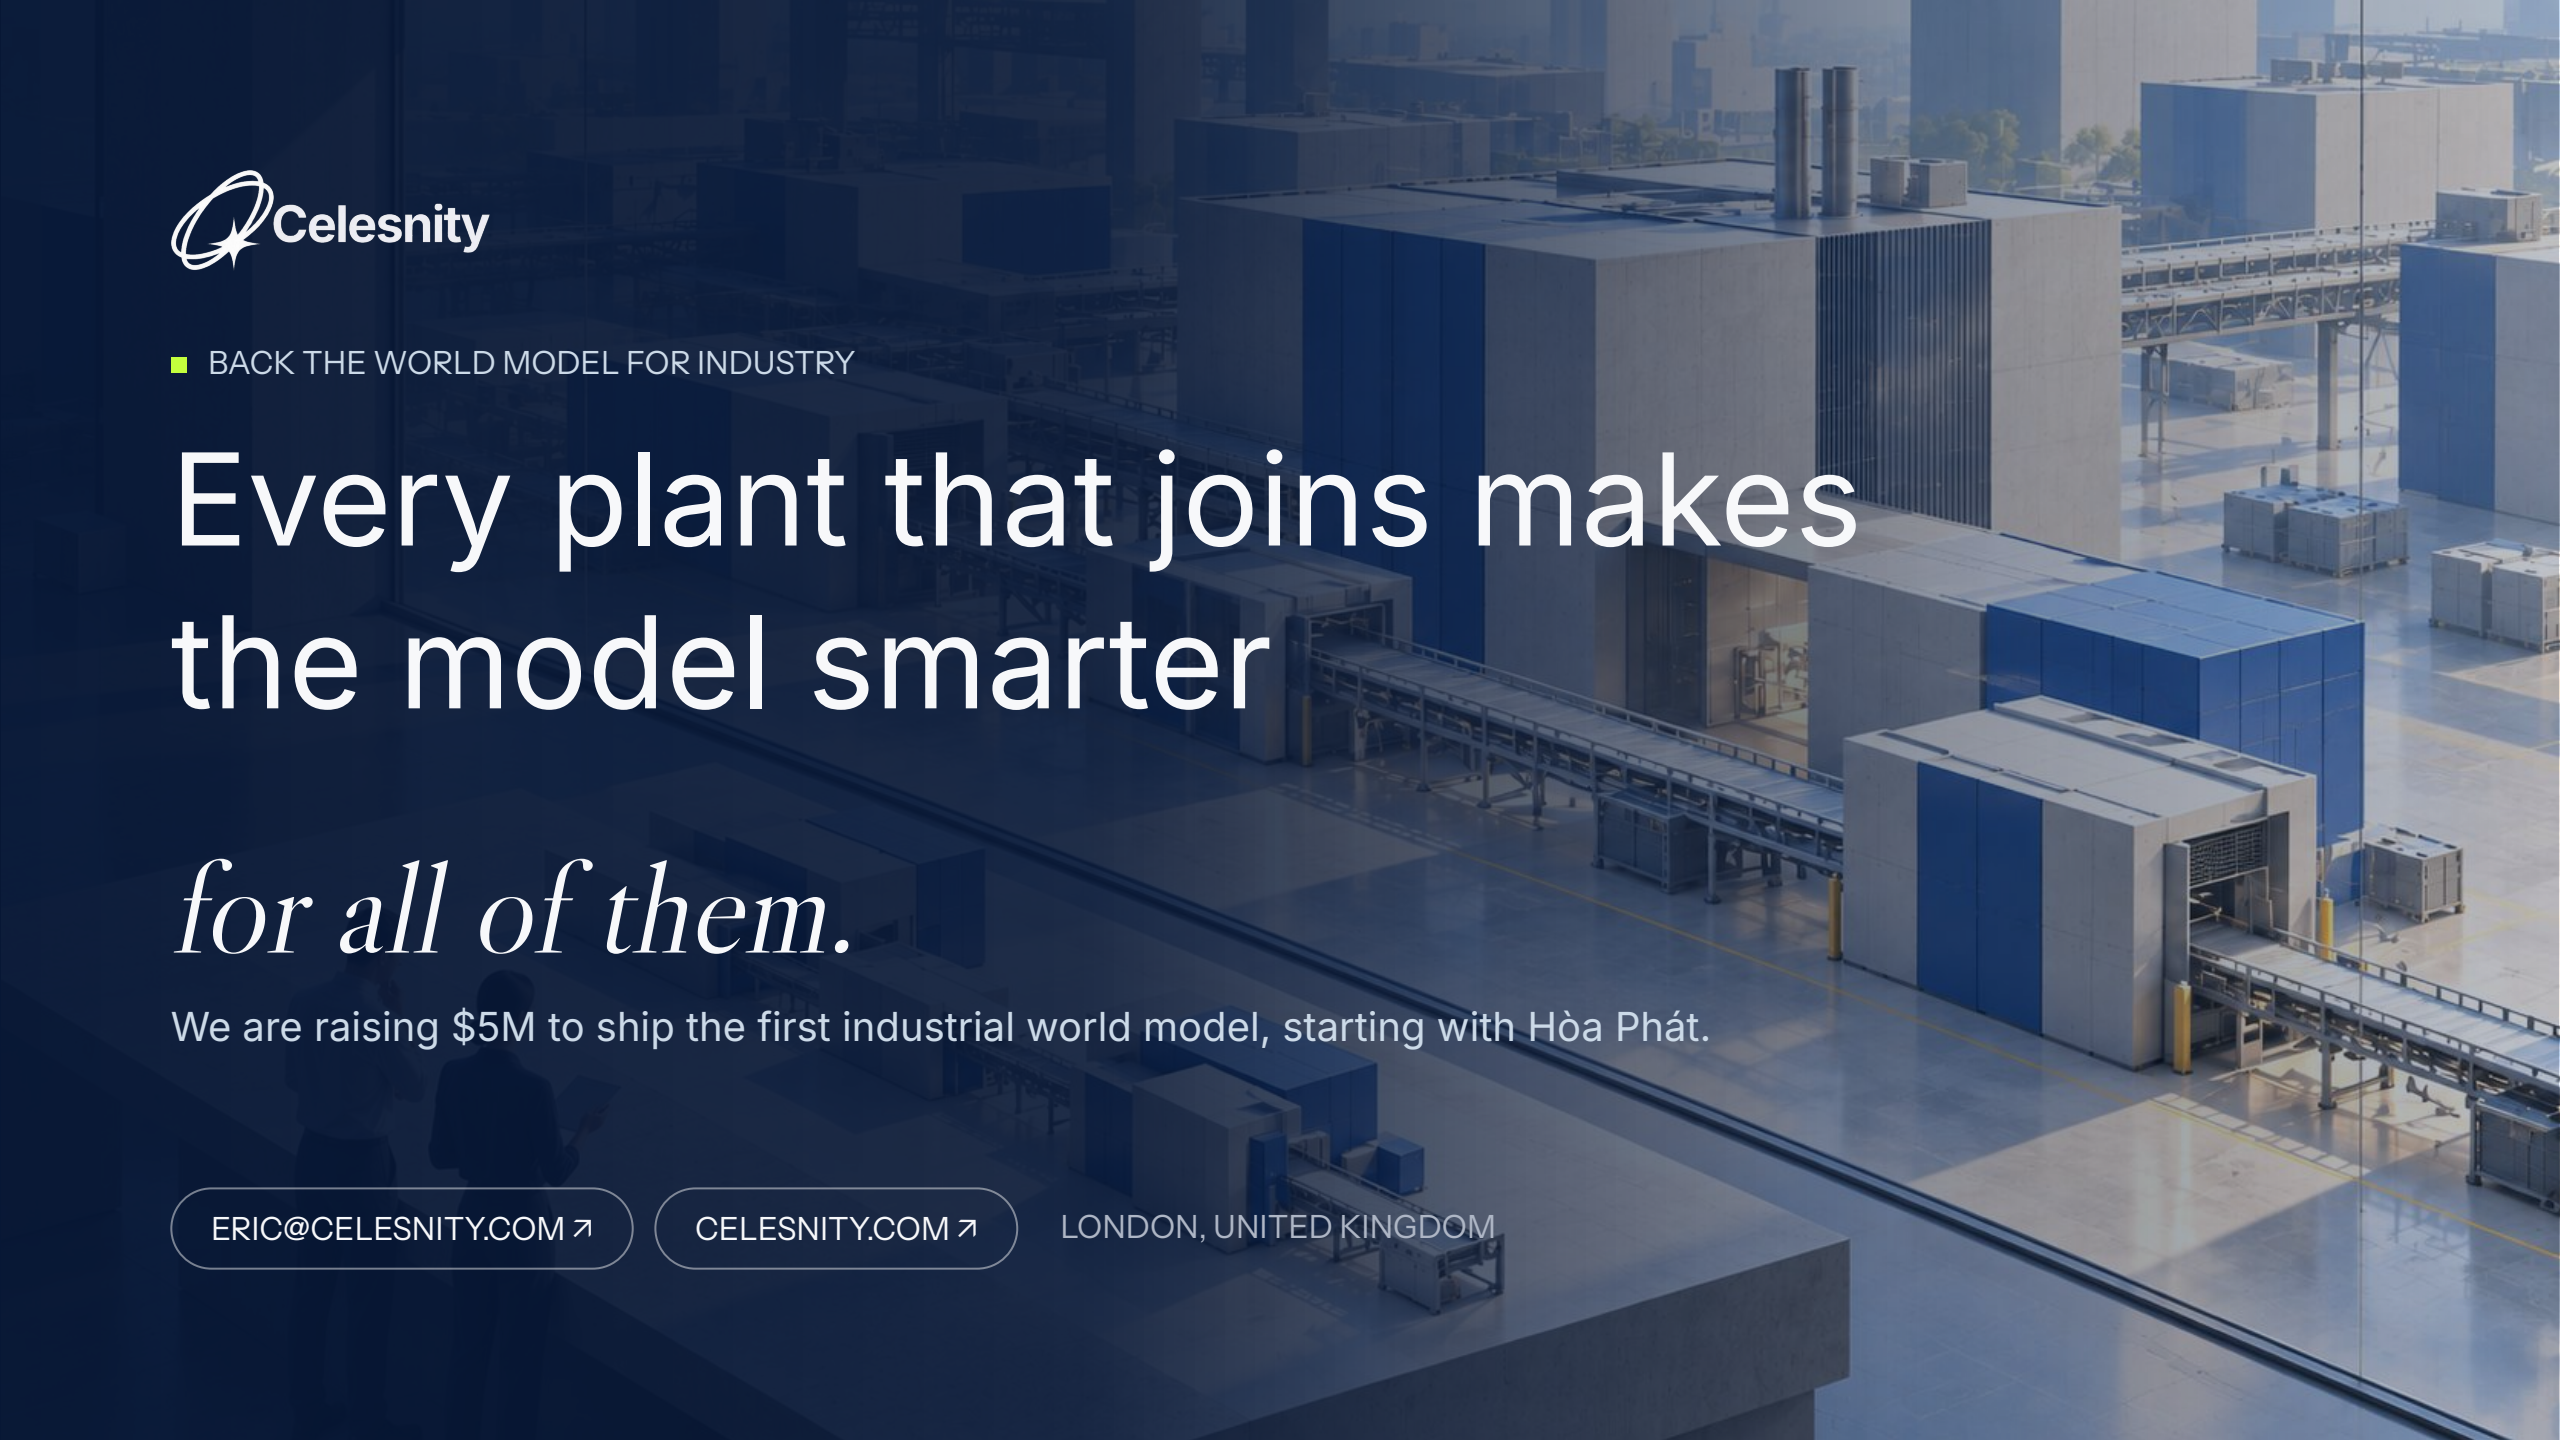

Up to $500k of Google Cloud and AWS credits cover early training.

USE OF FUNDS · 24 MONTHS

44% of planned spend goes to the world model team, compute and data (lime bars).

December close · EIS Advance Assurance in preparation · UK topco Celesnity Ltd · £100k angel, otherwise bootstrapped

Celesnity

BACK THE WORLD MODEL FOR INDUSTRY

Every plant that joins makes the model smarter

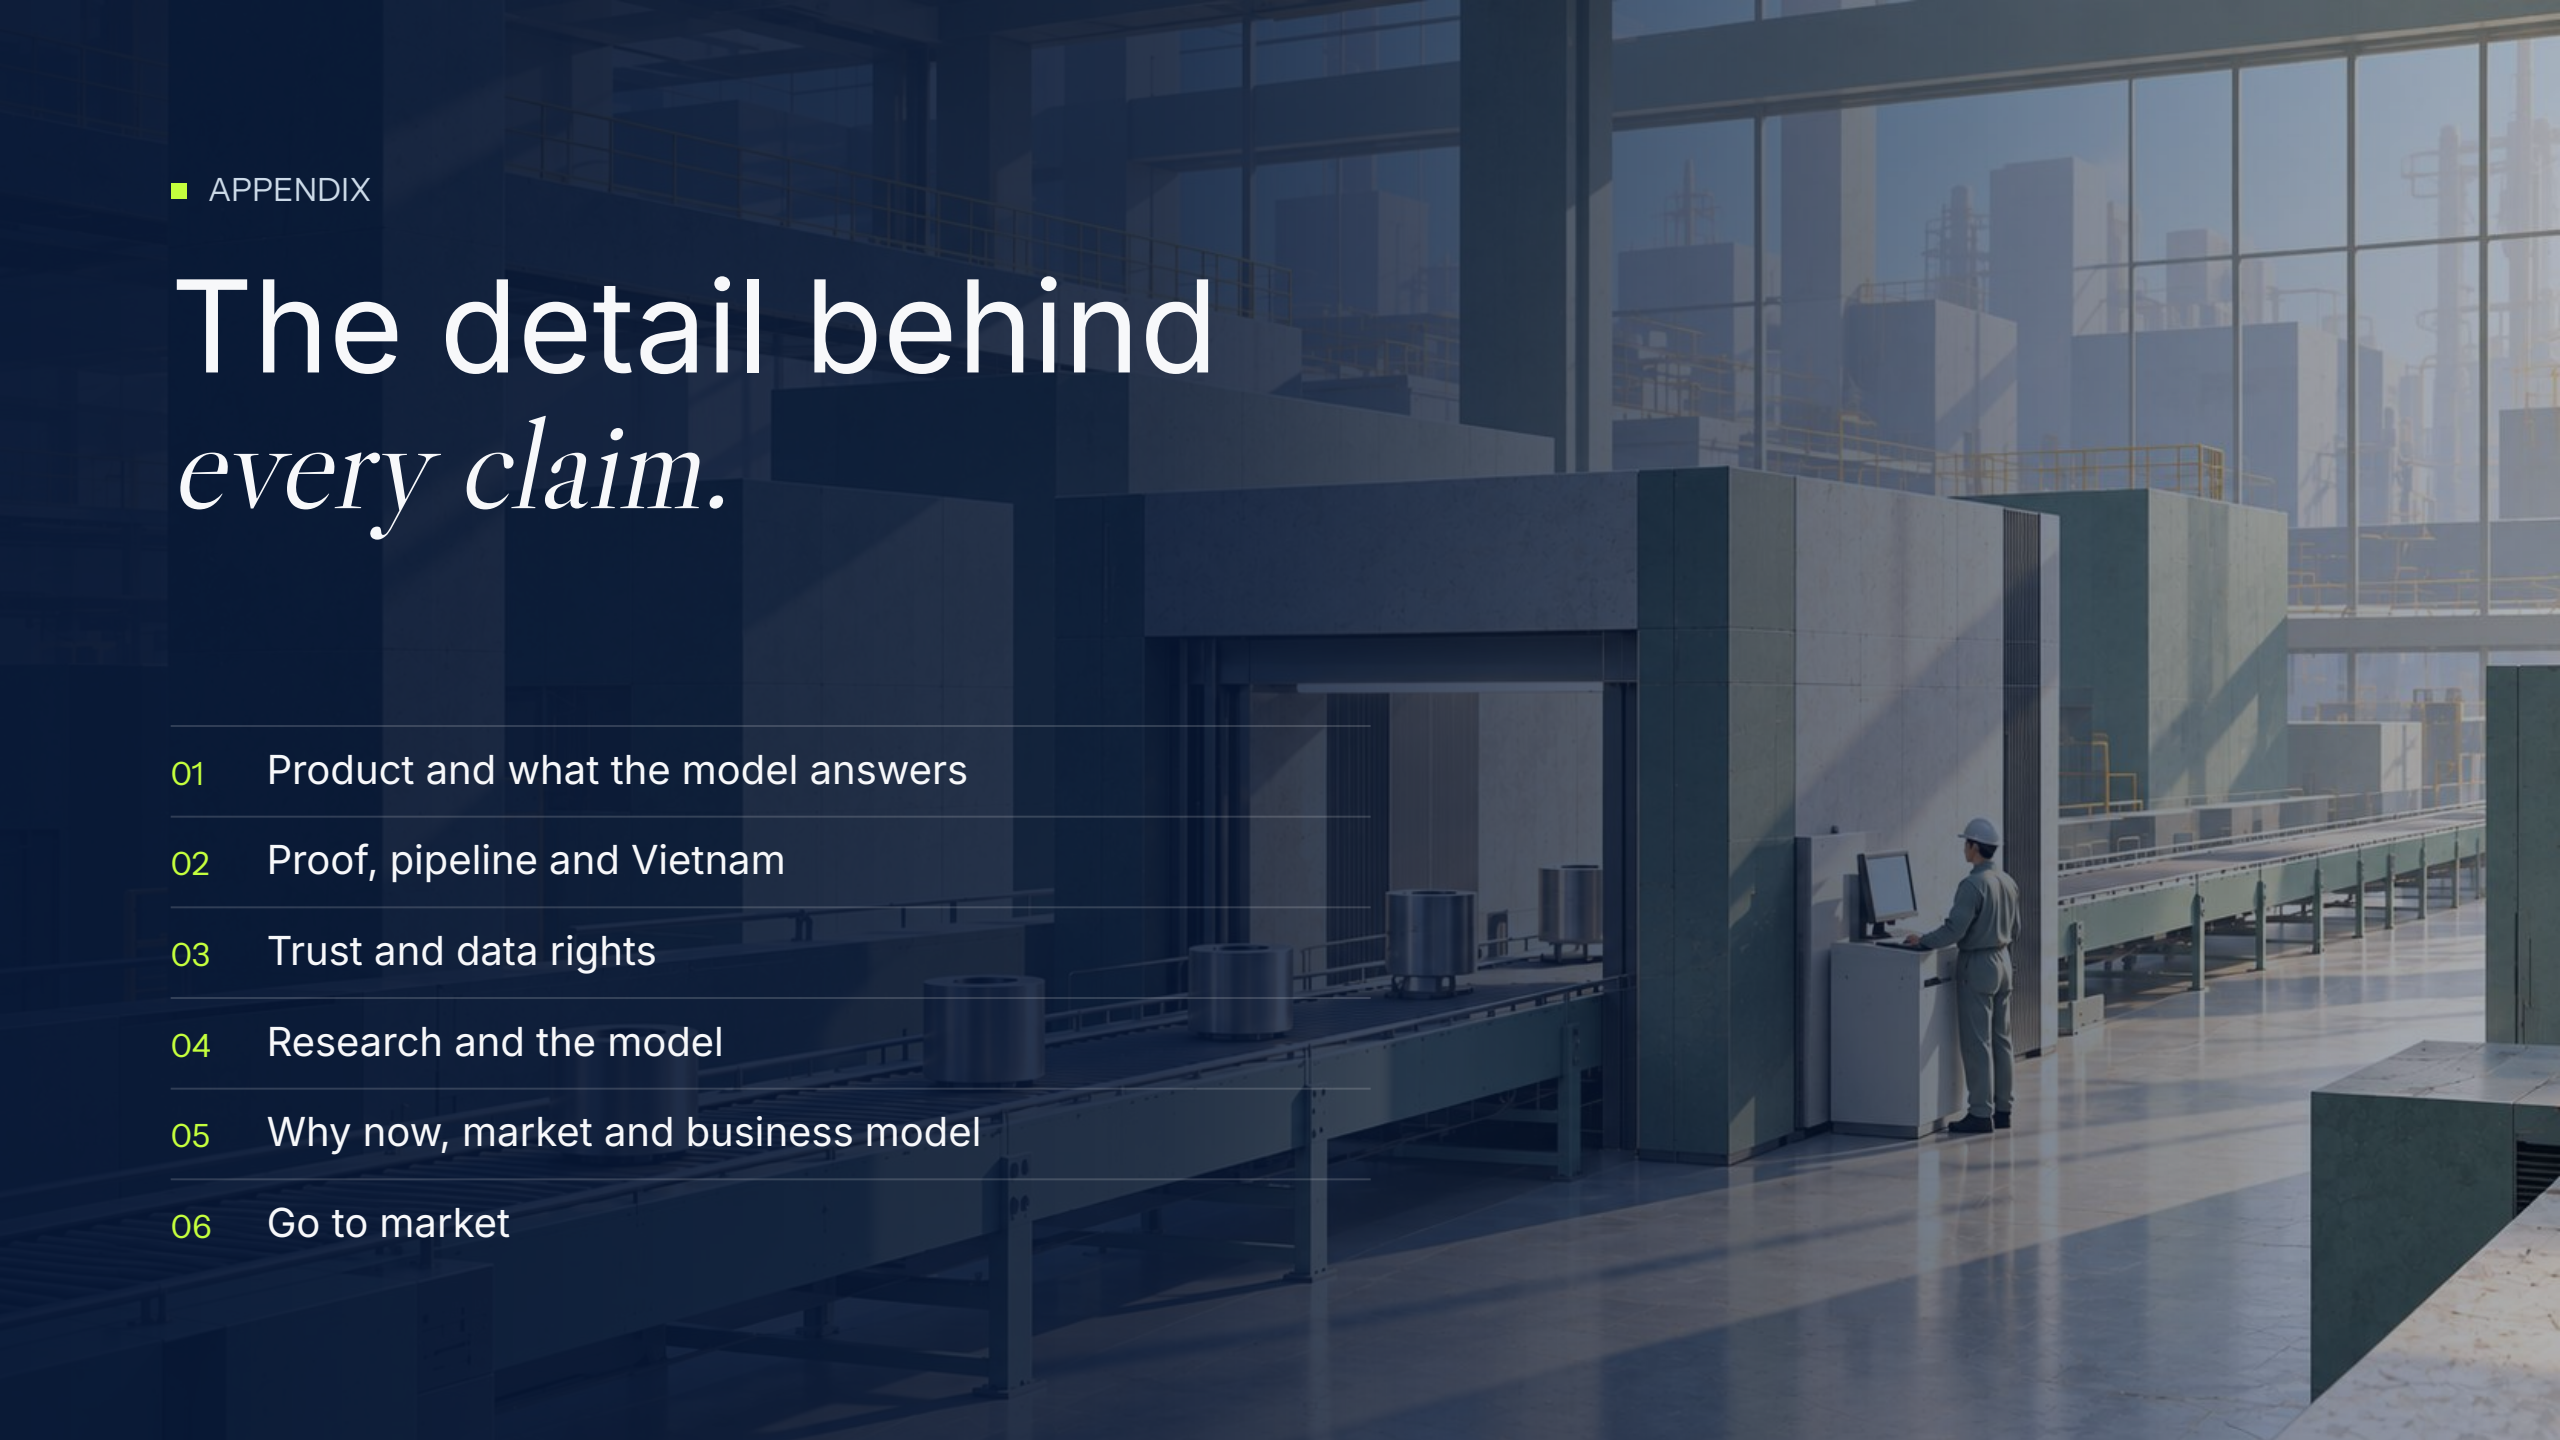

for all of them.

We are raising $5M to ship the first industrial world model, starting with Hòa Phát.

ERIC@CELESNITY.COM ↗ CELESNITY.COM ↗ LONDON, UNITED KINGDOM

APPENDIX

The detail behind *every claim.*

01 Product and what the model answers

02 Proof, pipeline and Vietnam

03 Trust and data rights

04 Research and the model

05 Why now, market and business model

06 Go to market

Minder runs operations today
and records every decision.

MINDER ON-DEVICE

Via people

Workers speak to Minder in their own language. Live at Kasa in Vietnamese.

MINDER ON-EDGE

Via sensors

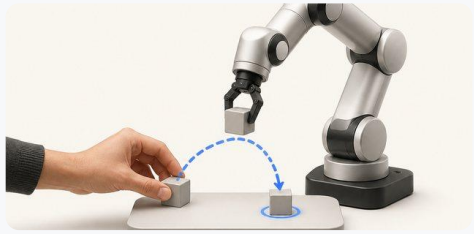

Retrofit sensors and cameras at $120 to $300 a device. PLC signals read only.

MINDER PLATFORM

Via software

ERP, MES, CMMS and historians connected, read only by default.

MINDER ROBOTICS

Via robots

In development: robots learn manual steps from human demonstrations.

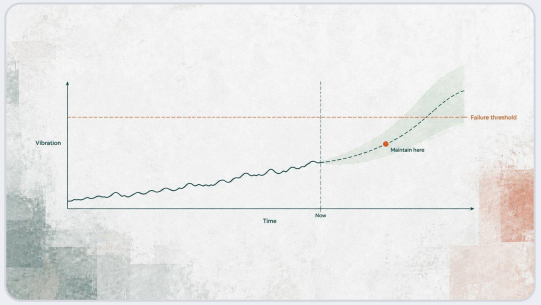

TWO WAYS IN

Midsize plants get the full platform and agent. Enterprises get a capture overlay on their existing stack.

ONE EVENT LOG

People, work, materials, machines and outcomes in one record. Every entry trains the world model.

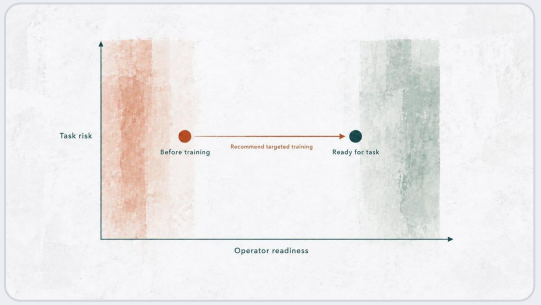

Ask it what happens next, *before you act.*

01 PREDICT

Read the wear. Service it before it fails.

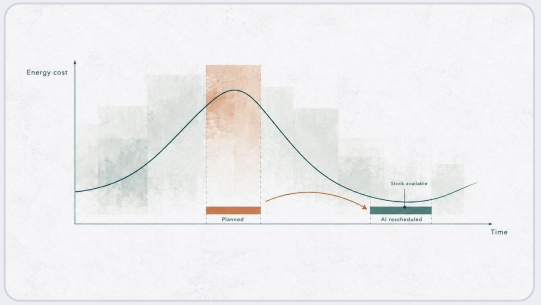

Asset maintenance: it forecasts wear and marks when to service.

02 RECOMMEND

Find the gap. Train before the task.

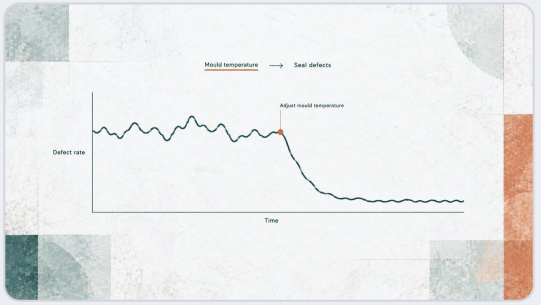

Safety and labour: it spots who is not yet ready for a risky task.

03 DECIDE

Shift the batch. Preserve stock.

Energy and inventory: it moves a batch to a cheaper window while stock holds.

04 IMPROVE

Find the cause. Fix it at the source.

Quality: it links mould temperature to seal defects, and defects fall.

EVERY FORECAST carries its confidence. When the model is unsure, it says so and asks an expert. People approve what matters.

APPENDIX · PREDICT · ILLUSTRATIVE

Elena sees what each choice will change.

ELENA ASKS

"What if we keep Line Three running two more hours?"

EVERY FORECAST

Carries its confidence. When the model is unsure, it says so and asks an expert.

RUN AS PLANNED — RISK RISES

Order ships. Breakdown risk rises.

Bearing temperature passes its limit before the shift ends.

RUN AT 80% — RECOMMENDED

Order ships. Risk stays low.

The slower run keeps the bearing in range and still makes the truck.

STOP NOW — PROMISE BREAKS

Order slips a day.

No risk to the machine, but the customer promise breaks.

Illustrative. v0 is first tested on real plant data at a Hòa Phát plant from November 2026.

APPENDIX · PROOF · INDUSTRIAL LAUNDRY, PHU QUOC

Live and paid at Kasa Laundry.

The Celesnity team with Kasa staff in Phu Quoc.

7
departments live on one event log

30/30
assigned workers active

39,117
events logged a day

6
weeks to go live, with two FDEs

24
month paid contract

20
tonnes of laundry a day

OUTCOMES · APPROVED BY KASA

−59%
rewash rate

−80%
missing items

85%
delivered on time

Contract invoiced since September 2026. Outcomes: April 2026 baseline vs August 2026, measured with and approved by Kasa.

APPENDIX · PROOF · WORLD MODEL PARTNER

Hòa Phát, Vietnam's largest manufacturer, *is our first world model partner.*

NETWORK

~30 factories

Operations data across a national group of steel and appliance plants.

APPLICATIONS

Full suite

Platform and agent deployed plant by plant, on founding terms.

WORLD MODEL

v0 · Nov 2026

NVIDIA Cosmos, fine tuned on their operations data, on Google Cloud.

DEPLOYMENT

Their AI team

Trained by us as forward deployed engineers, paid by Hòa Phát.

THE PRINCIPLE

Hòa Phát pays to use. We pay to own.

They get early access and founding terms. We keep the weights, the code and the training rights.

NEXT IN DISCUSSION

Nestlé · Isuzu

PIPELINE 1 paid · 8 MOUs signed · 3 scoping · 8 prospecting

$6.49bn combined partner revenue

APPENDIX · PIPELINE

On the floor, *from steel to laundry.*

STEEL AND APPLIANCES
Hòa Phát Group, world model partner

INDUSTRIAL LAUNDRY
Kasa (paid) · Hakawa · Văn Minh Huy · HQA · Five Stars

FOOD PROCESSING
Nestlé Vietnam · Saigon Food · Hue One Food · Expand Vietnam

WATER
Tân Hiệp Water · City Water Thu Duc

MOBILITY MANUFACTURING
Isuzu Vietnam

CEMENT
SCG Vietnam

PORTS
Chan May Port

TEXTILES
Scavi

BIOTECH
Probiotics

STAGE MIX 1 paid · 8 MOUs signed · 3 scoping · 8 prospecting

$6.49bn combined revenue across partners in pilots and talks

APPENDIX · WHY VIETNAM

Manufacturing is moving to Vietnam.

We are already on its floors.

8.0%
GDP growth in 2025, led by industry and construction at 8.95%.

$475bn
of exports in 2025, up 17% on 2024.

$27.6bn
of foreign direct investment disbursed in 2025, a five year high.

83%
of that investment went into manufacturing and processing.

WHAT VIETNAM GIVES US

Every kind of plant in one country. Some of the world's largest floors, where tacit knowledge is learnt from people. Deployment in weeks, and a full team for about $8k a month.

WHAT WE NEVER TRADE AWAY

European standards from day one: UK IP and contracts, EU data residency, GDPR and AI Act controls, ISO 27001 and SOC 2 on the way.

Source: General Statistics Office of Vietnam, full year 2025.

APPENDIX · TRUST

Customers own their data.
Celesnity owns the model.

Our Vietnam team gives us speed and cost in engineering. Europe holds the company, the IP, the data and the controls.

OWNERSHIP
Celesnity Ltd, London, owns all IP, models and weights.

DATA RESIDENCY
EU data stays in EU regions, UK data in London. Edge mode keeps plant data on site.

DATA ACCESS
Only European staff touch European customer data. Vietnam builds on code and anonymised data.

DATA RIGHTS
Customers own their raw data. Contribution to the world model is optional and anonymised.

MODELS
Model agnostic. Inference stays in region, with open weights on customer premises as an option.

WORKERS
No individual worker scoring. GDPR and works council ready. AI Act controls by December 2027.

CERTIFICATION PATH

ISO 27001 by June 2027 · SOC 2 by August 2027 · IEC 62443 aligned OT connectivity · Cyber Resilience Act ready edge devices

APPENDIX · THE DATASET

The missing dataset:
what people decide, and what follows.

A world model predicts the next state of a plant given an action. It can only learn from records that contain the action.

ROBOT TRAJECTORY

Observation → action → task result. Strong at embodiment and motor control.

INDUSTRIAL EXPERIENCE TRAJECTORY

Context	State	Goal	Action	Next state	Outcome	Why
plant, line, batch	sensors, alarms	task, KPI	command, approval	measured response	quality, time, energy	reason, confidence

V-JEPA 2 · META, 2025

1M hours of video plus under 62 hours of robot actions: enough to plan new tasks.

FACTORYNET · ICML 2026

51M datapoints, 23k task executions, six embodiments; early transfer between them.

WHY OURS CAN BE RICHER

It records why the plant changed and what happened next, not only what moved.

APPENDIX · THE MODEL

Our model learns a decision, *followed to its consequence.*

$$p(s', y \mid c, s, a)$$

The next state and its outcome, given the context, the state and the action taken.

c
CONTEXT
Plant, line, product, weather

s
STATE
Signals, alarms, queues, work in progress

a
ACTION
An operator's decision or an approved command

s′
NEXT STATE
The measured response

y
OUTCOME
Quality, time, energy, safety

e
WHY
Reason, confidence, diagnosis trace

Hybrid by design
Structure from machine logic, dynamics learned from data. Less data per plant.

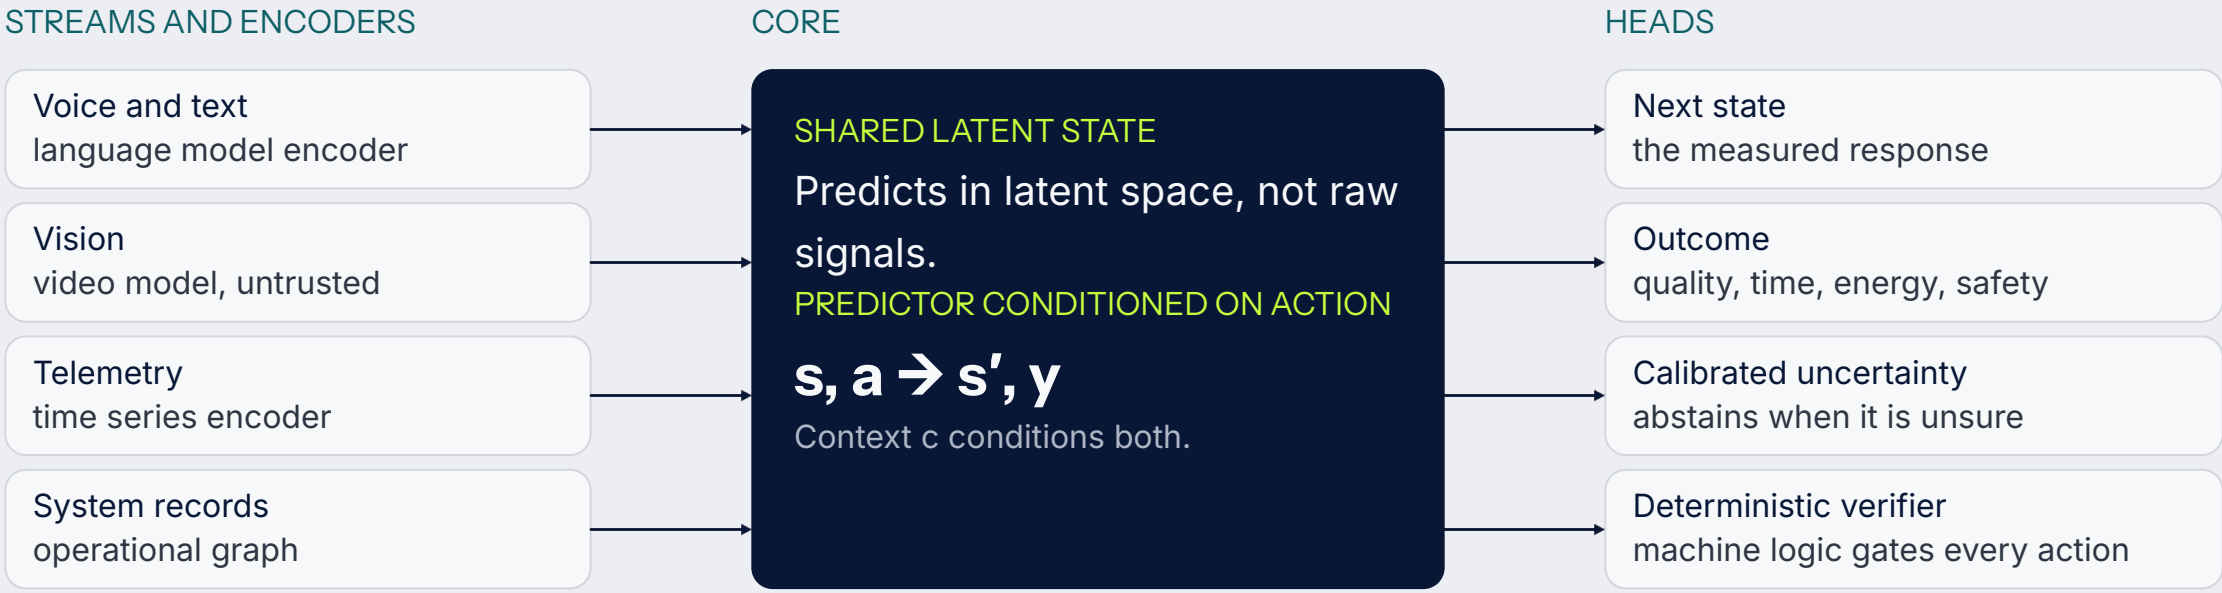

Calibrated
Every prediction carries its confidence. It abstains when it does not know.

Transferable
Trained across plants, designed to adapt to a new one with two weeks of data.

Built on Cosmos
v0 fine tunes NVIDIA Cosmos on Google Cloud, using our own event log.

APPENDIX · ARCHITECTURE

How v0 is built: one latent state of *the plant, predicted under action.*

v0 fine tunes NVIDIA Cosmos on Google Cloud, trained on our own event log. It serves the agent, and every action is gated by machine logic and human approval.

APPENDIX · THE ENGINE

Applications pay for the fleet.

The fleet trains the model.

01
Deploy
Applications go live in weeks, on a paid contract.

02
Capture
Decisions, actions and outcomes land on one event log.

03
Train
The shared world model improves with every plant.

04
Compound
Each plant makes the next one faster and cheaper.

APPLICATIONS · LIVE TODAY

See
One live picture of the whole plant.

LIVE AT KASA

Remember
Every decision, fix and outcome, kept.

LIVE AT KASA

WORLD MODEL · FROM NOVEMBER 2026

Predict
What each choice will change.

V0 · NOV 2026

Act
The agent acts. People approve.

2027

Run
Lines run themselves, with robots.

HORIZON

v0 is a falsifiable test.

NULL HYPOTHESIS

Every factory needs its own bespoke model.

TEST

Fine tune Cosmos on plants A and B, then adapt to plant C with two weeks of data.

PASS

Beats each plant's own model, with calibrated uncertainty, on five more plants by March 2027.

OUTPUT

A paper and an open benchmark, FactoryTraj-Bench.

RESEARCH GATES

V0	Across sites	One asset class, several plants. Gate: beats each site's own model.
V1	Across assets	Compressors and cold storage in food plants. Gate: transfers across asset classes.
V2	Whole plant	Orders, people and machines together. Gate: counterfactuals hold on logged interventions.
V3	Supervised action	Actions that carry proofs through validated adapters. Gate: zero unsafe actions in shadow mode.
Horizon	Embodiment	Robots trained on Minder trajectories. Gate: capability proven on the line.

APPENDIX · WHAT A PLANT ALREADY RUNS

25 systems, each right about its slice.

None records the decisions.

MES	ERP	SCADA	CMMS	WMS
QMS	LIMS	PLM	MOM	APS
MRP	HMI	PLC	DCS	Historian
OEE	SPC	CAPA	EHS	LOTO
Permits	BI	Twin	AGV and AMR	Kanban

+ an AI assistant that reads each one separately

WHAT WE BUILT INSTEAD

Minder records, connects, understands and coordinates the whole plant, so every system finally shares one operational reality.

Know · Plan · Produce · Move · Inspect · Maintain · Monitor · Protect · Optimise

Factories do not need another assistant on top of siloed systems. They need the record of the decisions between them.

APPENDIX · THE BLIND SPOT

Systems record the plan.

Plants run on unwritten rules.

THE PLAN · WHAT THE SYSTEM SEES

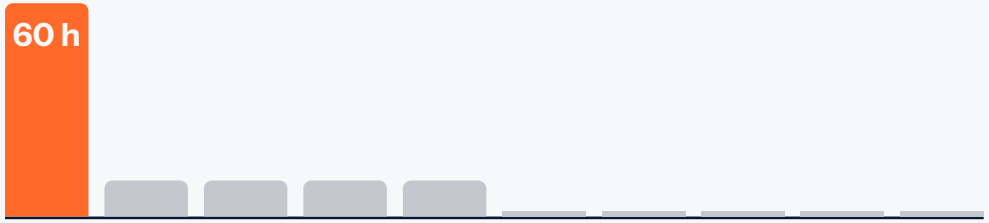

10 people, 10 hours each

100 hours of work, spread evenly.

THE FLOOR · WHAT REALLY HAPPENS

1 person carries 60 hours

Four share the other 40 hours. Five people wait.

That gap is capacity the plant already pays for. No system records it. Meanwhile unplanned downtime alone costs the world’s 500 largest companies $1.4tn a year, 11% of their revenue.

Source: Siemens, The True Cost of Downtime, 2024.

APPENDIX · THE CATEGORY

Every AI family learns *a different unit of the world.*

LANGUAGE	VIDEO WORLD MODELS	ROBOTICS	INDUSTRIAL SOFTWARE	**CELESNITY · MINDER**
Text	**Pixels**	**Motion**	**Records**	**Consequences**
What does this mean?	What will I see next?	How do I move?	What is the asset doing?	What happens if we do this?
Frontier LLMs	Genie, Cosmos, World Labs	π0, Skild AI	Siemens, AVEVA, Cognite, Tulip	Decisions, actions and outcomes, across plants

Industrial consequences are their own modality. They are only recorded inside live plants, which is exactly where Minder runs.

APPENDIX · WHY NOW

AI is learning the physical world.

Factories are next.

Cosmos 3

Open world models now predict actions and future states, even on edge devices. Our v0 starts here.

NVIDIA · JUN 2026

$2.3bn

into world model labs in H1 2026, including about $1bn each for AMI Labs and World Labs.

DEALROOM · H1 2026

4x

physical AI venture funding, H1 2026 against H2 2025: $47.4bn across 521 deals.

CRUNCHBASE · AUG 2026

40%

of enterprise apps will embed AI agents by the end of 2026, up from under 5% in 2025.

GARTNER · AUG 2025

PRICED IN BILLIONS Skild AI $14bn · Physical Intelligence $11bn · World Labs ~$5bn · AMI Labs $4.5bn · as reported, 2026

THE INFLECTION

Agents can now act and world models can now predict. Neither has the factory's decisions. Whoever records them first sets the standard.

APPENDIX · THE PRESSURE ON PLANTS

Fewer people, more machines, *and no record of what works.*

1.9M
US manufacturing roles could go unfilled by 2033.
DELOITTE AND THE MANUFACTURING INSTITUTE

542,000
industrial robots installed in 2024, more than double the total ten years earlier.
IFR WORLD ROBOTICS

74%
of UK industrial firms still run on legacy systems and disconnected data.
INTOWARE, 1,030 FIRMS

60%
typical OEE, against an 85% world class benchmark.
VORNE

11%
of revenue lost to unplanned downtime at the 500 largest companies: $1.4tn a year.
SIEMENS, 2024

€2.5tn
value added by EU manufacturing in 2023, before the wider physical economy.
EUROSTAT

APPENDIX · MARKET

$100bn a year to win in three regions.
China is upside.

$50tn
manufacturing and logistics, which NVIDIA expects physical AI to transform

$16.8tn
manufacturing value added a year, worldwide

~$5tn
of that value in Europe, East Asia and Southeast Asia, China excluded

TAM · A YEAR
$100bn
10% more capacity on ~$5tn of output, with 20% of that captured by Minder.

SAM · A YEAR
$39bn
246,600 plants with 50+ staff. Applications $26bn plus world model $13bn.

SOM · A YEAR
$390m
About 2,500 plants in five to seven years, starting with Hòa Phát's 30 factories.

Per plant a year: Southeast Asia $67k to $225k · Europe and East Asia $135k to $449k · World Model API not yet sized.

NVIDIA, Jan 2025 · World Bank, 2024 · plant counts estimated from Eurostat, ONS, METI, KOSIS, DGBAS, BPS and DOSM

APPENDIX · EUROPE, BOTTOM UP

£11.2bn to start in the EU.

A global ambition beyond it.

79,516

EU manufacturing enterprises with 50+ employees: 63,136 midsize and 16,380 large.

£112m of ARR at 1% penetration of a £11.2bn base.

MATURE FIXED ARR, APPLICATIONS ONLY

Per site, a year	Eastern Europe	Western Europe
Midsize	£54.7k	£90.4k
Large	£299.8k	£405.4k

Platform plus hardware, before value share and before the world model licence.

Eurostat SBS, EU27, 2023. Enterprise count is a conservative proxy for sites. Prices are planning assumptions. UK excluded.

APPENDIX · BUSINESS MODEL

One world model, many buyers.

HOW WE CHARGE

NOW

Applications

Site licence plus a share of measured value. Live at Kasa on a 24 month contract.

NEXT

World model licence

Per plant, from April 2027, founding partners first. Grows with the level of autonomy.

LATER

World Model API

Usage based access for machine builders, software vendors, robot makers and insurers.

WHO BUYS THE MODEL

Factories

Run the plant. Site licence and value share.

Machine builders

Ship it inside new machines. Per machine royalty.

Software vendors

Make MES, CMMS and ERP predictive. Licence and API usage.

Robot makers

Train robots on real plant context. Dataset fees.

Insurers and lenders

Price asset risk on real behaviour. Per asset fees.

Governments

National industrial intelligence. Sovereign deals.

UNIT ECONOMICS **$120 to $300** per device **~$12k** cloud per plant a year **70% to 90%+** gross margin

APPENDIX · GO TO MARKET

Channels whose economics improve *when their factories improve.*

VIETNAM · DEMAND AND FDE SUPPLY

SIHUB · HUEIDS · SOIHUB · Saigontel

Public innovation partners route us to member factories and help build local FDE capacity. Industrial groups join as founding world model partners, and their AI teams become our FDEs.

EUROPE · INCENTIVISED DISTRIBUTION

Private equity · incubators · agencies

Portfolio owners, incubators and public industrial networks gain when their factories improve: EBITDA for private equity, scale for clusters, productivity for governments.

HOW A PLANT CONVERTS

01 · BASELINE
An FDE maps the plant's true capacity.

02 · PROVE
Minder measures the improvement.

03 · PRICE
The contract reflects credible value.

04 · EXPAND
More autonomy, a larger contract.

OUR SALES STRATEGY is partner generated: every partner gains when its factories improve.
